ZAHRA ULAYA SIFA

Introduction of **Company**

About

Blinkit, formerly known as Grofers, is a leading Indian instant delivery service specializing in groceries and daily essentials. Founded in 2013, Blinkit has revolutionized the e-commerce grocery sector by adopting a quick commerce (q-commerce) model that delivers products to customers within 10–20 minutes. This ultra-fast delivery approach is supported by a network of micro-fulfillment centers, or dark stores, strategically located in urban areas.

Vision

To become the most trusted and fastest delivery platform, providing essential services and products that enhance everyday life.

Mission

Create a vibrant hyperlocal e-commerce economy that allows our partners – brands, merchants, delivery partners and customers – to benefit from the boom in digital transactions.

BUSINESS

REQUIREMENT

To conduct a comprehensive analysis of Blinkit's sales performance, customer satisfaction, and inventory distribution to identify key insights and opportunities for optimization using various KPIs and visualizations in Power BI.

KPI's Requirements:

- 1.Total Sales: The overall revenue generated from all items sold.
- 2.Average Sales: The average revenue per sale.
- 3.Number of Items: The total count of different items sold.
- 4.Average Rating: The average customer rating for items sold.

Granular Requirements:

- **1. Total Sales by Fat Content:**

Objective: Analyze the impact of fat content on total sales.

Additional KPI Metrics: Assess how other KPIs (Average Sales, Number of Items, Average Rating) vary with fat content.

- **2. Total Sales by Item Type:**

Objective: Identify the performance of different item types in terms of total sales.

Additional KPI Metrics: Assess how other KPIs (Average Sales, Number of Items, Average Rating) vary with item type.

- **3. Fat Content by Outlet for Total Sales:**

Objective: Compare total sales across different outlets segmented by fat content.

Additional KPI Metrics: Assess how other KPIs (Average Sales, Number of Items, Average Rating) vary with fat content.

- **4. Total Sales by Outlet Establishment:**

Objective: Evaluate how the age or type of outlet establishment influences total sales.

- **5. Percentage of Sales by Outlet Size:**

Objective: Analyze the correlation between outlet size and total sales.

- **6. Total Sales by Outlet Location:**

Objective: Assess the geographic distribution of sales across different locations.

- **7. All Metrics by Outlet Type:**

Objective: Provide a comprehensive view of all key metrics (Total Sales, Average Sales, Number of Items, Average Rating, Item Visibility) broken down by different outlet types.

ABOUT DATASET

Link: www.kaggle.com/datasets/arunkumaroraon/blinkit-grocery-dataset

Total Rows: 8523

No	Column	Description
1	Item Fat Content	Categorization of the fat content of the grocery items (e.g., Low Fat, Regular).
2	Item Identifier	Unique identifier for each grocery item in the dataset.
3	Item Type	Category or type of the grocery item (e.g., Dairy, Frozen Foods, Snacks).
4	Outlet Establishment Year	Year when the outlet (store) was established.
5	Outlet Identifier	Unique identifier for each outlet (store) in the dataset.
6	Outlet Location Type	Type of location where the outlet is situated (e.g., Urban, Rural).
7	Outlet Size	Size of the outlet (e.g., Small, Medium, High).
8	Outlet Type	Type of outlet (e.g., Grocery Store, Supermarket).
9	Item Visibility	Percentage of total display area of the item in the store.
10	Item Weight	Weight of the item.
11	Sales	Sales of the item in the given time period.
12	Rating	Customer rating or feedback score for the item or the outlet.

4	Supermarket Type3	131	935	140	3.95	0.06

CONCLUSION

No	Description
01	The Low Fat category outperformed the Regular category in both total sales and number of items sold, contributing 64.73% of the total sales volume. Despite this, the Regular category had a slightly higher average sales per item (141.50 vs. 140.71). Both categories received the same average customer rating of 3.97, indicating similar levels of customer satisfaction.
02	The Fruits and Vegetables and Snack Foods categories recorded the highest total sales, driven by substantial item volumes, while Household and Dairy products exhibited the highest average sales per item, and Household and Meat received the highest customer satisfaction ratings at 4.00 and 4.02 respectively.
03	Tier 3 outlets showed the highest total sales and item volume for both Low Fat and Regular products, suggesting that consumer demand in smaller or semi-urban areas may be higher regardless of fat content.
04	Outlets established in 2018 achieved the highest total sales, indicating a possible correlation between newer infrastructure or strategy and improved sales performance.
05	Medium-sized outlets dominated total sales with a 42.27% contribution, outperforming both small and high-sized outlets, suggesting an optimal balance between capacity and efficiency.
06	outlets in Tier 3 areas (semi-urban or smaller towns) recorded the highest total sales (472.13) compared to Tier 2 and Tier 1, indicating that demand may be higher in less urbanized regions, possibly due to a larger consumer base or lower market competition in those areas.
07	Supermarket Type1 significantly outperformed other outlet types in total sales (788) and item volume (5,577), indicating its dominant role in product distribution, while Grocery Stores had the highest item visibility (0.10) and rating (3.99), suggesting better customer experience despite lower sales.

RECOMMENDATION

No	Description
01	Focus on Low Fat products due to their dominant contribution to total sales and volume, as well as high customer satisfaction levels.
02	Strengthen promotional and distribution strategies for the Fruits, Vegetables, and Snacks categories with high sales volume, and leverage the high customer satisfaction in the Household and Meat categories.
03	Increase market penetration in Tier 3 areas, which show strong demand for both Low Fat and Regular products.
04	Analyze and replicate the strategies used by outlets opened after 2018, as they demonstrate better sales performance.
05	Prioritize medium-sized outlets as they offer an optimal balance between efficiency and sales performance.
06	Maximize the potential of Grocery Stores through improved conversion strategies, such as better product placement and targeted promotions.
07	Expand the Supermarket Type1 model to other regions due to its outstanding performance in total sales and product volume.
